SUMMARY

Software developer with 2+ years of hands-on experience building automation tools, browser extensions, and data pipelines that replace manual processes with working software. Self-directed builder who has independently shipped production tools in JavaScript, TypeScript, React, Python, and VBA — including a Chrome extension suite that cut daily case-processing time by over 94% for a 180+ country support operation. Comfortable across the stack, from UI scripting and workflow automation to data validation and reporting pipelines, with a consistent track record of finding operational bottlenecks and building the tool that fixes them.

SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL, C#, Visual Basic (VBA), HTML/CSS
- **Frameworks & Tools:** React, Chrome Extension APIs, Power Query M, Excel VBA, DOM/UI automation
- **Concepts:** Process automation, data validation & transformation pipelines, workflow/UI scripting, relational data modeling
- **Spoken Languages:** English (fluent), Korean (native)

PROJECTS

Postnet Plus — Chrome Extension — *JavaScript, Chrome Extension APIs*

- Designed and built a Chrome extension that automates repetitive case-handling tasks inside a closed internal network system used by international mail investigators.
- Reverse-engineered a proprietary UI framework (exBuilder 6) with no source access, enabling deep runtime object manipulation that powered claim processing shortcuts, priority highlighting, reminders, and form auto-fills.

TrackPost — Chrome Extension — *React, TypeScript*

- Built a full extension application from scratch, including a React front end and TypeScript logic layer, used daily by 14 colleagues to autofill 200–300 forms per day, cutting per-form entry time from 5 minutes to < 5 seconds.
- Designed the real-time notification and autofill system to integrate directly with existing case-tracking workflows, reducing manual data entry and entry errors for end users.

BookCollector — Excel Automation Tool — *VBA, Power Query M*

- Built an automation tool that consolidates 40–50 Excel files (spanning 3+ years of data) into unified statistical reports, cutting a full day of manual compilation down to under a minute.
- Implemented data integrity checks, transformation pipelines, and validation logic in VBA and Power Query M to guarantee accurate, audit-ready output for daily reports used by senior management and directors.

EXPERIENCE

Korea Postal Service Agency | Junior Specialist | Seoul, Korea *Nov 2023 – Apr 2026*

- Independently designed and developed “Postnet Plus” and “TrackPost,” two internal software tools that automated repetitive case-processing tasks and cut daily processing time by over 94%.
- Investigated and resolved lost-item cases within the International Mail Inquiry Center of Korea's national postal service.
- Managed inquiries across 180+ countries, handling approximately 10,000 cases covering address changes, return requests, and indemnity settlements, using custom-built tooling to manage volume that would otherwise have required a larger team.
- Contributed to a 2nd-place world ranking in Kahala Posts Group CS quality; awarded the “Top Excellence Award” in the 2024 Business Innovation Contest for this automation work.

JS Korea Co., Ltd. | Assistant Manager | Wando, Korea *Mar 2019 – Jul 2020*

- Owned the full export lifecycle for seafood products across four international markets (Hong Kong, Vietnam, Singapore, Cambodia), managing quarantine inspections, health certificate issuance, and all regulatory shipping documentation.
- Planned and coordinated high-volume, time-sensitive international logistics spanning air freight (~USD 100K/month) and container shipments (~USD 130K/month), synchronizing customs, carrier, and compliance requirements across multiple countries simultaneously.

Military Service — Mokpo Nat'l University | Social Service Agent | Mokpo, Korea *Mar 2014 – Mar 2016*

- Managed records for 2,500 student reservists.
- Designed and built an Excel VBA macro that automated a manual reporting task, cutting execution time from 3 hours to 10 minutes, which was an early precursor to the automation work later expanded at the Korea Postal Service Agency.

EDUCATION

- **Mokpo National University** — Bachelor of Business Administration, Department of International Trade, Mar 2013 – Feb 2019
  Cumulative GPA: 3.65 / 4.5
